

/shiny-modules

The solution to scalability

- Modules are *functions* they help you reuse code;
anything you can do with a function, you can do with a module
- *Namespacing makes it easier*

```
# app.R
ui <- fluidPage(
  your_UI("tab1"),
  your_UI("tab2")
)

# Server ----
server <- function(input, output, session) {
  your_server("tab1")
  your_server("tab2")
}

shinyApp(ui, server)
```
